MCQs

References

★ Applicable to all classes of this unit

Max Marks: 9

1) The sequence of commands that are meant to execute in order is called

☐ Graphs☐ Events☒ Stream☐ Kernel

2) Shading technique used to compute the colour values based on the colour of the vertices, the nature of the ambient light source and model of reflectivity of the surface is called

☐ Phong Shading☐ General Shading☒ Goraud Shading

Skill TestMy Placement
Info☐ Zero shading

3) The process of converting the triangles (or polygons) into sets of pixels is called

☐ Tessellation☒ Rasterization☐ Fragmentation☐ Vectorization

4) Vertex shaders are used to

☒ To add the visual effects to the scene.☐ To add the lighting effects to the scene.☐ To add the colour effects to the scene.☐ To add the wooding effects to the scene.

5) Shader program which is used in motion detection, adding texture, etc is a

☐ Software☐ Hardware☒ Software, to run efficiently, it needs elaborate hardware support☐ firmware

6) CUDA is an abbreviation for

- ☐ Compute Unified Design Architecture
- ☐ Compute Universal Device Architecture
- ☐ Compute Unified Design Architecture
- ☒ Compute Unified Device Architecture

7) A process of automatically creating an image (2D or 3D) from same rules and models is known as

- ☐ pixeling
- ☐ Rastering
- ☐ fragmenting
- ☒ Rendering

8) The set of threads are grouped together to run on GPU is called

- ☐ Kernel
- ☒ Warp
- ☐ Grid
- ☐ Graphs

9) Dividing the surface of an object into a set of polygons is called

- ☒ Tessellation
- ☐ Rasterization
- ☐ Vectorization
- ☐ Fragmentation
